

ADEBANJO JOHNSON ADEGBEMIRO

Data Analyst · Business Intelligence

Lagos, Nigeria · +234 803 938 8464 · adebanjohnson1@gmail.com · linkedin.com/in/adebanjo-adegbemiro

PROFESSIONAL SUMMARY

Data Analyst with over two years of fintech experience analysing high-volume transaction and credit data for eight business units. Combines advanced SQL, Power BI, R, and Excel with Power Automate and scheduled Python jobs to deliver automated reports, live dashboards, and credit-risk packs that management uses for revenue, churn, channel, reconciliation, and exposure decisions. Known for data accuracy, clear executive communication, and closing the gap between raw systems data and the questions leadership needs answered.

PROFESSIONAL EXPERIENCE

Data and BI Analyst

June 2025 – Present

Vale Finance · Hybrid, Lagos

- Write and optimise complex SQL against the core transactions database to extract, validate, and analyse large volumes of customer, product, and operational data for daily, weekly, and monthly management reports.
- Support eight departments with recurring reports, Pivot Tables, and decision-ready outputs that management uses for revenue, product, and operational calls.
- Designed and deployed Power BI dashboards on customer churn, product usage, inactivity, and performance across millions of records; built the SQL and ETL path from database to visualisation and cut churn-analysis turnaround time by 100%.
- Automated Power BI reporting pipelines serving six departments, removing manual refresh dependency and accelerating organisation-wide reporting by 50%.
- Currently designing an organisation-wide Power BI solution that automates the Monthly Performance Report (MPR), Weekly Performance Report (WPR), and mid-week executive pack so the full office receives a consistent, refreshable view of business performance.
- Built Power Automate flows for the HR unit to track client onboarding and offboarding which in turn serves the data team as a pipeline in Power BI to maintain a live customer view and to measure DSA and BDM performance through dedicated tables and visuals.
- Architected MySQL-to-Python pipelines for sales performance, product-growth analytics, and cross-departmental reporting across eight business units, eliminating manual extraction.
- Schedule and run Python jobs for recurring extracts, validation checks, and lightweight transformations that feed dashboards and departmental workbooks.
- Delivered live-connected Excel reports so executives can refresh data independently, reducing ad-hoc reporting requests by 50%.
- Integrated Prometheus and Grafana with the transactions database to monitor system health, API uptime, and transaction-processing downtime, enabling proactive incident detection across product lines.
- Ran statistical and exploratory analysis on millions of financial transaction records to identify revenue patterns, operational anomalies, and performance trends adopted by senior leadership.
- Documented the organisation's schema (tables, relationships, keys) to strengthen data governance across the Organization.

Risk Management Analyst

August 2024 – May 2025

Vale Finance · Hybrid, Lagos

- Analysed financial statements, credit files, and portfolio data and packaged findings for stakeholders and executives making critical credit-risk decisions.
- Delivered in-depth credit-risk and portfolio analysis, flagging concentration, delinquency, and exposure patterns used to tighten underwriting and monitoring.
- Drafted and maintained the organisation's Business Continuity Plan (BCP) so core operations could continue through disruption.
- Built and kept current the enterprise risk register: identified, assessed, classified, and tracked risks and incidents through to corrective action.
- Managed incident reporting and risk classification with Operations and Control, shortening the time from issue identification to documented response.
- Produced credit and portfolio packs that Finance and Management used for limit reviews, recovery priorities, and compliance discussions.

Administrative Assistant and Data Analyst

January 2023 – May 2023

FUTA Divine God's Favour Cooperative Society · On-site

- Analysed loan portfolios and Remita transaction data to profile debtors, flag defaulters, and improve financial reporting and recovery decisions.
- Completed monthly bank reconciliations across all accounts and designed Excel dashboards for loan requests, repayment trends, and portfolio performance.

- Implemented a SharePoint structure for sensitive financial records to improve access control and data governance.

CORE SKILLS

SQL & Databases: Complex queries, joins, CTEs, window functions, aggregates, query optimisation, MySQL, data validation on large transaction datasets

Business Intelligence: Power BI (dashboards, data modelling, automated refresh), Excel (Power Query, Pivot Tables, XLOOKUP, live-connected workbooks)

Automation & Workflow: Power Automate, scheduled Python jobs, ETL pipelines, Prometheus, Grafana, n8n.

Analytics stack: R (strong — statistical analysis and research workflows), Python (working knowledge; scheduled jobs and extracts; actively deepening for production workflows)

Working methods: Anomaly detection, data quality, schema documentation; disciplined use of AI tools to accelerate query drafting, documentation, and exploratory work, with independent review before anything is shared

Domain: Fintech transactions, customer activity and churn, DSA/BDM performance, product usage, sales, operational uptime, credit and portfolio risk

EDUCATION & CONTINUOUS LEARNING

B.Tech, Agricultural and Resource Economics — First Class Honours

2017 – 2023

The Federal University of Technology, Akure (FUTA)

- Fractal Data Science: SQL for Business
- DataCamp: Data Manipulation with SQL; Exploratory Data Analysis in SQL; Introduction to Python
- RU Forum: R Programming for Researchers
- Self-directed study in Python, Power BI automation, and workflow design, applied directly to live reporting and scheduled jobs at Vale.
